

ANALOG 10-Bit, Integrated, Multiformat SDTV/HDTV DEVICES Video Decoder and RGB Graphics Digitizer Video Decoder and RGB Graphics Digitizer

ADV7401

FEATURES

Four 10-bit ADCs sampling up to 140 MHz (140 MHz speed grade only) 12 analog input channel mux **SCART fast blank support** Internal antialias filters NTSC/PAL/SECAM color standards support 525p-/625p-component progressive scan support 720p-/1080i-component HDTV support Digitizes RGB graphics up to 1280 × 1024 @ 75 Hz (SXGA) (140 MHz speed grade only) 24-bit digital input port supports data from DVI/HDMI Rx IC Any-to-any, 3 × 3 color-space conversion matrix Industrial temperature range (-40°C to +85°C) 12-bit 4:4:4/8-bit 4:2:2 DDR pixel output interface

APPLICATIONS

LCD/DLP™ rear projection HDTVs **PDP HDTVs CRT HDTVs** LCD/DLP front projectors LCD TV (HDTV ready) **HDTV STBs with PVR** Hard-disk-based video recorders **Multiformat scan converters** DVD recorders with progressive scan input support **AVR** receiver

Programmable interrupt request output pin

VBI data slicer (including teletext)

GENERAL DESCRIPTION

The ADV7401 is a high quality, single chip, multiformat video decoder and graphics digitizer. This multiformat decoder supports the conversion of PAL, NTSC, and SECAM standards in the form of composite or S-video into a digital ITU-R BT.656 format. The ADV7401 also supports the decoding of a component RGB/YPrPb video signal into a digital YCrCb or RGB pixel output stream. The support for component video includes standards such as 525i, 625i, 525p, 625p, 720p, 1080i, 1250i, and many other HD and SMPTE standards. Graphic digitization is also supported by the ADV7401; it is capable of digitizing RGB graphics signals from VGA to SXGA rates and converting them into a digital RGB or YCrCb pixel output stream. SCART and overlay functionality are enabled by the ADV7401's ability to simultaneously process CVBS and standard definition RGB signals. The mixing of these signals is controlled by the fast blank pin.

The ADV7401 contains two main processing sections. The first is the standard definition processor (SDP), which processes all PAL, NTSC, and SECAM signal types. The second is the component processor (CP), which processes YPrPb and RGB component formats, including RGB graphics. For more specific descriptions of the ADV7401 features, see the Detailed Functionality and Detailed Description sections.

 $^{^1}$ The min/max specifications are guaranteed over this range. 2 Temperature range T_MIN to T_MAX: -40°C to $+85^\circ\text{C}$ (0°C to 70°C temperature range for ADV7401KSTZ-140).

- ³ All specifications obtained using programming scripts with the following sequence included: Addr 0x0E data 0x80, Addr 0x54 data 0x00, Addr 0x0E data 0x00. ⁴ All ADC linearity tests performed at input range of full scale 12.5%, and at zero scale + 12.5%.
- ⁵ Max INL and DNL specifications obtained with part configured for component video input.
- ⁶ Specification for ADV7401BSTZ-110 and ADV7401KSTZ-140 only.
 ⁷ Specification for ADV7401KSTZ-140 only.
- ⁸ Guaranteed by characterization.
- 9 To obtain specified V_{IH} level on Pin 38, Register 0x13 (wo) must be programmed with value 0x04. If Register 0x13 is programmed with value 0x00, then V_{IH} on Pin 38 = 1.2 V.
- 10 To obtain specified V_L level on Pin 38, Register 0x13 (wo) must be programmed with value 0x04. If Register 0x13 is programmed with value 0x00, then V_{IL} on Pin 38 = 0.4 V.
- ¹¹ Pins 1, 2, 13, 14, 16, 19, 24, 29, 30, 31, 32, 33, 34, 35, 45, 79, 83, 84, 87, 88, 95, 96, 97, 100.
- ¹² V_{OH} and V_{OL} levels obtained using default drive strength value (0xD5) in Register Subaddress 0xF4.
- ¹³ Pins 3, 13, 14, 19, 24, 29, 30, 31, 32, 33, 34, 45.
- 14 Analog current measurements for CVBS made with ADC0 powered up only, For RGB, ADC0, ADC1 and ADC2 powered up only, for SCART FB, all ADCs powered up.

VIDEO SPECIFICATIONS

STRESS RATINGS

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

PACKAGE THERMAL PERFORMANCE

To reduce power consumption when using the part the user is advised to turn off any unused ADCs .

The junction temperature must always stay below the maximum junction temperature ($T_{J\ MAX}$) of 125°C. This equation shows how to calculate the junction temperature:

$$T_I = T_{A Max} + (\theta_{IA} \times W_{Max})$$

where:

 $T_{A Max} = 85$ °C.

 $\theta_{IA} = 30^{\circ}\text{C/W}.$

 $W_{Max} = ((AVDD \times IAVDD) + (DVDD \times IDVDD) + (DVDDIO \times IDVDDIO) + (PVDD \times IPVDD)).$

THERMAL SPECIFICATIONS

Table 6.

| Thermal Characteristics | Symbol | Test Conditions | Тур | Unit |
|--|---------------|---|-----|------|
| Junction-to-Case Thermal Resistance | θις | 4-layer PCB with solid ground plane | 7 | °C/W |
| Junction-to-Ambient Thermal Resistance | θ_{JA} | 4-layer PCB with solid ground plane (still air) | 30 | °C/W |

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Electrostatic charges as high as 4000 V readily accumulate on the human body and test equipment and can discharge without detection. Although this product features proprietary ESD protection circuitry, permanent damage may occur on devices subjected to high energy electrostatic discharges. Therefore, proper ESD precautions are recommended to avoid performance degradation or loss of functionality.

PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

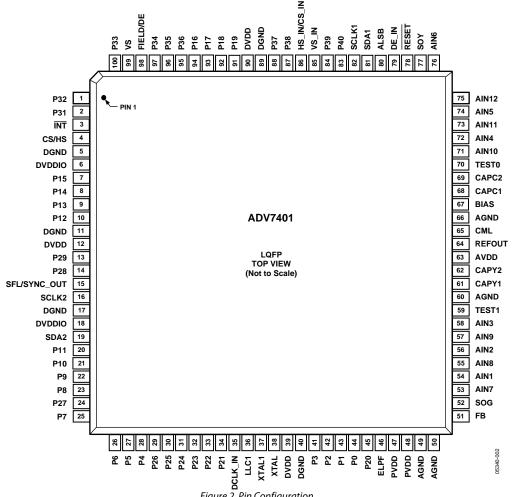

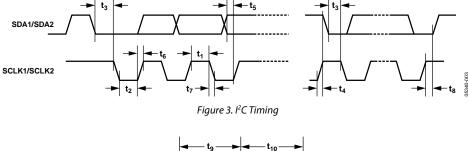

Figure 2. Pin Configuration

Table 7. Pin Function Descriptions

| Pin No. | Mnemonic | Туре | Function |
|--|---|------|---|
| 5, 11, 17, 40, 89 | DGND | G | Digital Ground. |
| 49, 50, 60, 66 | AGND | G | Analog Ground. |
| 6, 18 | DVDDIO | Р | Digital I/O Supply Voltage (3.3 V). |
| 12, 39, 90 | DVDD | Р | Digital Core Supply Voltage (1.8 V). |
| 63 | AVDD | Р | Analog Supply Voltage (3.3 V). |
| 47, 48 | PVDD | Р | PLL Supply Voltage (1.8 V). |
| 51 | FB | 1 | Fast Switch Overlay Input. This pin switches between CVBS and RGB analog signals. |
| 54, 56, 58, 72, 74, 76, 53, 55, 57, 71, 73, 75 | AIN1 to AIN12 | 1 | Analog Video Input Channels. |
| 42, 41, 28, 27, 26, 25, 23, 22, 10, 9, 8, 7, 94, 93, 92, 91 | P2 to P9, P12 to P19 | 0 | Video Pixel Output Port. |
| 33, 32, 31, 30, 29, 24, 14, 13 | P22 to P29 | I/O | Video Input/Output Port |
| 44, 43, 21, 20, 45, 34, 2, 1, 100, 97, 96, 95, 88, 87, 84, 83 | P0 to P1, P10 to P11, P20 to P21, P31 to P40 | 1 | Video Pixel Input Port. |
| 3 | ĪNT | 0 | Interrupt. This pin can be active low or active high. When SDP/CP status bits change this pin triggers. The set of events that triggers an interrupt is under user control. |

| Pin No. | Mnemonic | Туре | Function |
|---------|--------------|------|--|
| 4 | HS/CS | 0 | HS is a Horizontal Synchronization Output Signal (SDP and CP modes). CS is a Digital Composite Synchronization Signal (and can be selected while in CP mode). |
| 99 | VS | 0 | Vertical Synchronization Output Signal (SDP and CP modes). |
| 98 | FIELD/DE | 0 | Field Synchronization Output Signal (all interlaced video modes). This pin also can be enabled as a Data Enable signal (DE) in CP mode to allow direct connection to a HDMI/DVI Tx IC. |
| 81, 19 | SDA1, SDA2 | I/O | I ² C Port Serial Data Input/Output Pins. SDA1 is the data line for the control port and SDA2 is the data line for the VBI readback port. |
| 82, 16 | SCLK1, SCLK2 | 1 | I ² C Port Serial Clock Input (max clock rate of 400 kHz). SCLK1 is the clock line for the control port and SCLK2 is the clock line for the VBI data readback port. |
| 80 | ALSB | I | This pin selects the I ² C address for the ADV7401 control and VBI readback ports. ALSB set to Logic 0 sets the address for a write to control port of 0x40 and the readback address for the VBI port of 0x21. ALSB set to a logic high sets the address for a write to control port of 0x42 and the readback address for the VBI port of 0x23. |
| 78 | RESET | 1 | System Reset Input, Active Low. A minimum low reset pulse width of 5 ms is required to reset the ADV7401 circuitry. |
| 36 | LLC1 | 0 | LLC1 is a line-locked output clock for the pixel data (range is 12.825 MHz to 140 MHz for ADV7401KSTZ-140; 12.825 MHz to 110 MHz for ADV7401BSTZ-110; 12.825 MHz to 80 MHz for ADV7401BSTZ-80). |
| 38 | XTAL | 1 | Input pin for 28.63636 MHz crystal, or can be overdriven by an external 3.3 V 28.63636 MHz clock oscillator source to clock the ADV7401. |
| 37 | XTAL1 | 0 | This pin should be connected to the 28.63636 MHz crystal or left as a no connect if an external 3.3 V 28.63636 MHz clock oscillator source is used to clock the ADV7401. In crystal mode, the crystal must be a fundamental crystal. |
| 46 | ELPF | 0 | The recommend external loop filter must be connected to this ELPF pin. |
| 70 | TEST0 | NC | This pin should be left unconnected or alternatively tied to AGND. |
| 59 | TEST1 | 0 | This pin should be left unconnected. |
| 15 | SFL/SYNC_OUT | 0 | Subcarrier Frequency Lock (SFL). This pin contains a serial output stream which can be used to lock the subcarrier frequency when this decoder is connected to any Analog Devices digital video encoder. SYNC_OUT is the sliced sync output signal available only in CP mode. |
| 64 | REFOUT | 0 | Internal Voltage Reference Output. |
| 65 | CML | 0 | Common-Mode Level Pin (CML) for the internal ADCs. |
| 61, 62 | CAPY1, CAPY2 | 1 | ADC Capacitor Network. |
| 68, 69 | CAPC1, CAPC2 | 1 | ADC Capacitor Network. |
| 67 | BIAS | 0 | External Bias Setting Pin. Connect the recommended resistor (1.35 k Ω) between pin and ground. |
| 86 | HS_IN/CS_IN | I | Can be configured in CP mode to be either a digital HS input signal or a digital CS input signal used to extract timing in a 5-wire or 4-wire RGB mode. |
| 85 | VS_IN | 1 | VS Input Signal. Used in CP mode for 5-wire timing mode. |
| 79 | DE_IN | 1 | Data Enable Input Signal. Used in 24-bit digital input port mode (for example, processing 24-bit RGB data from a DVI Rx IC). |
| 35 | DCLK_IN | I | Clock Input Signal. Used in 24-bit digital input mode (for example, processing 24-bit RGB data from a DVI Rx IC) and also in digital CVBS input mode. |
| 52 | SOG | 1 | Sync on Green Input. Used in embedded sync mode. |
| 77 | SOY | 1 | Sync on Luma Input. Used in embedded sync mode. |

TIMING DIAGRAMS

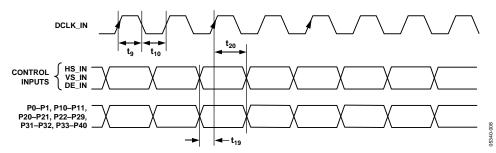

Figure 7. Digital Input Port and Control Input Timing

DETAILED FUNCTIONALITY

ANALOG FRONT END

- Four high quality 10-bit ADCs enable true 8-bit video decoder
- 12 analog input channel mux enables multisource connection without the requirement of an external mux
- Four current and voltage clamp control loops ensure any dc offsets are removed from the video signal
- SCART functionality and SD RGB overlay on CVBS controlled by fast blank input
- Four internal antialias filters to remove out-of-band noise on standard definition input video signals

SDP PIXEL DATA OUTPUT MODES

- 8-bit ITU-R BT.656 4:2:2 YCrCb with embedded time codes and/or HS, VS, and FIELD
- 16-bit YCrCb with embedded time codes and/or HS, VS, and FIELD
- 24-bit YCrCb with embedded time codes and/or HS, VS, and FIELD

CP PIXEL DATA OUTPUT MODES

- Single data rate (SDR) 8-bit 4:2:2 YCrCb for 525i, 625i
- Single data rate (SDR) 16-bit 4:2:2 YCrCb for all standards
- Single data rate (SDR) 24-bit 4:4:4 YCrCb/RGB for all standards
- Double data rate (DDR) 8-bit 4:2:2 YCrCb for all standards
- Double data rate (DDR) 12-bit 4:4:4 YCrCb/RGB for all standards

COMPOSITE AND S-VIDEO PROCESSING

- Support for NTSC (J, M, 4.43), PAL (B, D, I, G, H, M, N, 60) and SECAM B/D/G/K/L standards in the form of CVBS and S-video
- Superadaptive 2D 5-line comb filters for NTSC and PAL give superior chrominance and luminance separation for composite video
- Full automatic detection and autoswitching of all worldwide standards (PAL/NTSC/SECAM)
- Automatic gain control with white peak mode ensures the video is always processed without loss of the video processing range
- Adaptive digital line length tracking (ADLLT[™])

- Proprietary architecture for locking to weak, noisy, and unstable sources from VCRs and tuners
- IF filter block compensates for high frequency luma attenuation due to tuner SAW filter
- Chroma transient improvement (CTI)
- Luminance digital noise reduction (DNR)
- Color controls include hue, brightness, saturation, contrast, and Cr and Cb offset controls
- Certified Macrovision copy protection detection on composite and S-video for all worldwide formats (PAL/NTSC/SECAM)
- 4× oversampling (54 MHz) for CVBS, S-video, and YUV modes
- Line-locked clock output (LLC)
- Letterbox detection supported
- Free-run output mode provides stable timing when no video input is present
- Vertical blanking interval data processor

TeleText

Video Programming System (VPS)

Vertical Interval Time Codes (VITC)

Closed captioning (CC) and extended data service (EDS)

Wide screen signaling (WSS)

Copy generation management system (CGMS)

Gemstar[™] 1×/2× electronic program guide compatible

- Clocked from a single 28.63636 MHz crystal
- Subcarrier frequency lock (SFL) output for downstream video encoder
- Differential gain typically 0.5%
- Differential phase typically 0.5°

COMPONENT VIDEO PROCESSING

- Formats supported include 525i, 625i, 525p, 625p, 720p, 1080i, and many other HDTV formats
- Automatic adjustments include gain (contrast) and offset (brightness); manual adjustment controls are also supported
- Support for analog component YPrPb/RGB video formats with embedded sync or with separate HS, VS, or CS
- Any-to-any, 3 × 3 color space conversion matrix supports YCrCb-to-RGB and RGB-to-YCrCb
- Standard identification (STDI) enables system level component format detection
- Synchronization source polarity detector (SSPD) determines the source and polarity of the synchronization signals that accompany the input video
- Certified Macrovision copy protection detection on component formats (525i, 625i, 525p, and 625p)
- Free-run output mode provides stable timing when no video input is present
- Arbitrary pixel sampling support for nonstandard video sources

RGB GRAPHICS PROCESSING

- 140 MSPS conversion rate supports RGB input resolutions up to 1280 × 1024 @ 75 Hz (SXGA); (110 MSPS conversion rate for ADV7401BSTZ-110); (80 MSPS conversion rate for ADV7401BSTZ-80)
- Automatic or manual clamp and gain controls for graphics modes
- Contrast and brightness controls
- 32-phase DLL allows optimum pixel clock sampling
- Automatic detection of sync source and polarity by SSPD block
- Standard identification is enabled by STDI block
- RGB can be color space converted to YCrCb and decimated to a 4:2:2 format for video centric backend IC interfacing
- Data enable (DE) output signal supplied for direct connection to HDMI/DVI Tx IC
- Arbitrary pixel sampling support for nonstandard video sources

DIGITAL VIDEO INPUT PORT

- Supports raw 8-bit CVBS data from digital tuner
- Support for 24-bit RGB input data from DVI Rx chip, output converted to YCrCb 4:2:2
- Support for 24-bit 4:4:4, 16-bit 4:2:2 525i, 625i, 525p, 625p, 1080i, 720p, VGA to SXGA @ 60 Hz input data from HDMI Rx chip, output converted to 16-bit 4:2:2 YCrCb

GENERAL FEATURES

- HS, VS, and FIELD output signals with programmable position, polarity, and width
- Programmable interrupt request output pin, INT, signals SDP/CP status changes
- Supports two I²C host port interfaces (control and VBI)
- Low power consumption: 1.8 V digital core, 3.3 V analog and digital I/O, low power power-down mode, and green PC mode
- Industrial temperature range (-40°C to +85°C) (except ADV7401KSTZ-140)
- 140 MHz speed grade (ADV7401KST-140)
- 100-lead, 14 mm × 14 mm, Pb-free LQFP

DETAILED DESCRIPTION

ANALOG FRONT END

The ADV7401 analog front end comprises four 10-bit ADCs that digitize the analog video signal before applying it to the SDP or CP (see Table 8 for sampling rates). The analog front end uses differential channels to each ADC to ensure high performance in a mixed-signal application.

The front end also includes a 12-channel input mux that enables multiple video signals to be applied to the ADV7401. Current and voltage clamps are positioned in front of each ADC to ensure that the video signal remains within the range of the converter. Fine clamping of the video signals is performed downstream by digital fine clamping in either the CP or SDP.

Optional antialiasing filters are positioned in front of each ADC. These filters can be used to band-limit standard definition video signals, removing spurious, out-of-band noise.

The ADCs are configured to run in $4\times$ oversampling mode when decoding composite and S-video inputs; $2\times$ oversampling is performed for component 525i, 625i, 525p, and 625p sources. All other video standards are $1\times$ oversampled. Oversampling the video signals reduces the cost and complexity of external anti-aliasing filters with the benefit of an increased signal-to-noise ratio (SNR).

The ADV7401 can support simultaneous processing of CVBS and RGB standard definition signals to enable SCART compatibility and overlay functionality. A combination of CVBS and RGB inputs can be mixed and output under control of I²C registers and the fast blank pin.

Table 8. Maximum ADC Sampling Rates

| | 1 8 ····· |
|------------------|---------------------------|
| Model | Maximum ADC Sampling Rate |
| ADV7401BSTZ-80 | 80 MHz |
| ADV7401BSTZ-110 | 110 MHz |
| ADV7401WBSTZ-110 | 110 MHz |
| ADV7401KSTZ-140 | 140 MHz |

STANDARD DEFINITION PROCESSOR (SDP)

The SDP section is capable of decoding a large selection of baseband video signals in composite S-video and YUV formats. The video standards supported by the SDP include PAL B/D/I/G/H, PAL60, PAL M, PAL N, NTSC M/J, NTSC 4.43, and SECAM B/D/G/K/L. The ADV7401 can automatically detect the video standard and process it accordingly.

The SDP has a 5-line superadaptive 2D comb filter that gives superior chrominance and luminance separation when decoding a composite video signal. This highly adaptive filter automatically adjusts its processing mode according to video standard and signal quality with no user intervention required.

The SDP has an IF filter block that compensates for attenuation in the high frequency luma spectrum due to tuner SAW filter.

The SDP has specific luminance and chrominance parameter control for brightness, contrast, saturation, and hue.

The ADV7401 implements a patented adaptive-digital-line-length-tracking (ADLLT) algorithm to track varying video line lengths from sources such as a VCR. ADLLT enables the ADV7401 to track and decode poor quality video sources such as VCRs, noisy sources from tuner outputs, VCD players, and camcorders. The SDP also contains a chroma transient improvement (CTI) processor. This processor increases the edge rate on chroma transitions, resulting in a sharper video image.

The SDP can process a variety of VBI data services, such as TeleText, closed captioning (CC), wide screen signaling (WSS), video programming system (VPS), vertical interval time codes (VITC), copy generation management system (CGMS), Gemstar 1×/2×, and extended data service (XDS). The ADV7401 SDP section has a Macrovision 7.1 detection circuit that allows it to detect Types I, II, and III protection levels. The decoder is also fully robust to all Macrovision signal inputs.

COMPONENT PROCESSOR

The CP section is capable of decoding/digitizing a wide range of component video formats in any color space. Component video standards supported by the CP are 525i, 625i, 525p, 625p, 720p, 1080i, 1250i, VGA up to SXGA @ 75 Hz (ADV7401KSTZ-140 only), and many other standards not listed here.

The CP section of the ADV7401 contains an AGC block. When no embedded sync is present, the video gain can be set manually. The AGC section is followed by a digital clamp circuit that ensures the video signal is clamped to the correct blanking level. Automatic adjustments within the CP include gain (contrast) and offset (brightness); manual adjustment controls are also supported.

A fully programmable, any-to-any, 3×3 color space conversion matrix is placed between the analog front end and the CP section. This enables YPrPb-to-RGB and RGB-to-YCrCb conversions. Many other standards of color space can be implemented using the color space converter.

The output section of the CP is highly flexible. It can be configured in single data rate mode (SDR) with one data packet per clock cycle or in a double data rate (DDR) mode where data is presented on the rising and falling edges of the clock. In SDR mode, a 16-bit 4:2:2 or 24-bit 4:4:4 output is possible. In these modes HS, VS, and FIELD/DE (where applicable) timing reference signals are provided. In DDR mode, the ADV7401 can be configured in an 8-bit 4:2:2 YCrCb or 12-bit 4:4:4 RGB/ YCrCb pixel output interface with corresponding timing signals.

The ADV7401 is capable of supporting an external DVI/HDMI receiver. The digital interface expects 24-bit 4:4:4 or 16-bit 4:2:2 bit data (either graphics RGB or component video YCrCb), accompanied by HS, VS, DE, and a fully synchronous clock signal. The data is processed in the CP and output as 16-bit 4:2:2 YCrCb data.

The CP section contains circuitry to enable the detection of Macrovision encoded YPrPb signals for 525i, 625i, 525p, and 625p. It is designed to be fully robust when decoding these types of signals.

VBI extraction of CGMS data is performed by the CP section of the ADV7401 for interlaced, progressive, and high definition scanning rates. The data extracted can be read back over the I²C interface. For more detailed product information about the ADV7401, contact your local ADI sales office or email video.products@analog.com.

PIXEL INPUT/OUTPUT FORMATTING

Purchase of licensed I²C components of Analog Devices or one of its sublicensed Associated Companies conveys a license for the purchaser under the Philips I²C Patent Rights to use these components in an I²C system, provided that the system conforms to the I²C Standard Specification as defined by Philips.

¹ The ADV7401 is a Pb-free, environmentally friendly product. It is manufactured using the most up-to-date materials and processes. The coating on the leads of each device is 100% pure Sn electroplate. The device is suitable for Pb-free applications, and is able to withstand surface-mount soldering at up to 255°C (±5°C). In addition, it is backward compatible with conventional SnPb soldering processes. This means that the electroplated Sn coating can be soldered with SnPb solder pastes at conventional reflow temperatures of 220°C to 235°C.

 $^{^{2}}$ Z = RoHS Compliant Part.
